

PROVILAN PROBIOTIC ALLERGEN FREE & DERMO CARE CASE STUDY

TOPICAL PROBIOTIC THERAPY FOR RAW AND BROKEN SKIN RECOVERY IN DOGS

Before

Week 2

Week 4

Introduction: Addressing Severe Skin Damage

Bear presented with raw, broken skin on his neck and lower back. The affected areas were inflamed, increasing the risk of infection and causing significant discomfort. Conventional treatments were not an option due to the owner's preference for natural, non-invasive solutions.

The team at The Dog House - Horsham recommended probiotic therapy as an alternative approach to support Bear's recovery. Their suggestion was based on the proven benefits of topical probiotics in outcompeting pathogenic bacteria to calm inflammation, and support the skin's natural healing process.

Treatment Protocol: Probiotic Solutions for Skin Healing

Bear's treatment plan involved a combination of two topical probiotic sprays:

- **Provilan Probiotic Dermo Care Spray.** Applied twice daily directly to the broken skin on Bear's neck to reduce infection and promote healing.
- **Provilan Probiotic Allergen-Free Spray.** Applied twice daily to the raw skin on his back and sprayed onto his bedding to manage environmental allergens and support overall skin health.

These sprays contain live beneficial microorganisms (probiotics) that outcompete harmful bacteria and neutralise bio-allergens while rebalancing the skin microbiome.

Results: Noticeable Improvement in Skin Health Within Weeks

Week 1: Inflammation reduced, and the raw skin areas began to heal. Scratching and discomfort were significantly lessened.

Week 2: Broken skin on the neck showed clear signs of repair, with scabbing and reduced redness.

Week 4: Skin returned to a healthy state, and Bear was visibly comfortable and happier.. Bear's owner expressed relief at finding an effective solution that avoided harsh chemicals and antibiotics while delivering results.

Note: Provilan Vet probiotic sprays are not medicines or medical devices.
